

# measuring conditions illustrated

# Results

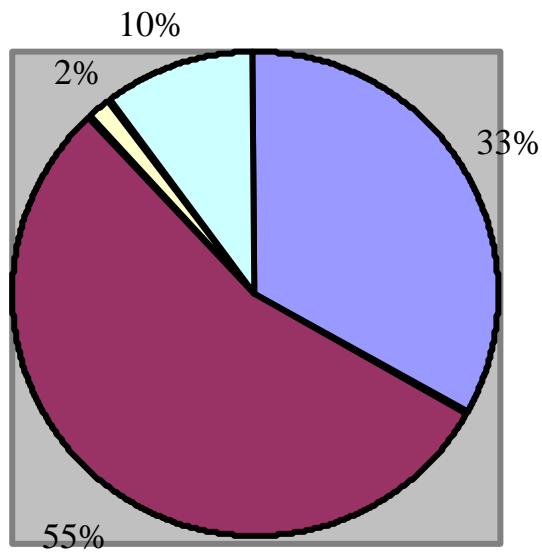

- problems:
  - (cisco.com related burdens)
  - one single Fluke isn't enough
  - TCP/IP is no realtime protocol
  - measuring affects the outcome
- → steady state (analysis)

## Results (continued)

- details (scripts)
- NT vs Unix – OS-Overhead
- SNMP requests generate not more than ~65% CPU-Load
- SNMPapp + macof(dsniff) shows impact (~91% CPU-Load)

# Results illustrated 1

**console\_01.txt**

# Results illustrated 2

## 5 Min SNMPapp + macof.txt
